**Subject:** Second interview  
**To:** You <[You@Gmail.com](mailto:You@Gmail.com)>

Good morning:

Congratulations on reaching the next phase of the interview process for the junior data scientist position! My clients at Sewati Financial Services are impressed with your qualifications and look forward to meeting you.

The interview will take place Wednesday at 3:30 PM. You will meet with Kai Harvey, the senior manager of strategy. Please note that this will be a behavioral interview. A behavioral interview first involves being presented with some scenarios typically encountered by junior data scientists. Then, you'll be asked to consider how you would respond if faced with these situations in real life. Don't worry if you haven't had these experiences in a professional role; they're simply interested in understanding how you would handle these kinds of scenarios.

To help you prepare, take a look at the following topic areas:

- Types of bias found in data (including sampling bias)
- Types and use of data
- Types and use of metadata
- Filtering and sorting in spreadsheets
- Basic SQL commands, such as SELECT, FROM, and WHERE
- Data privacy

Again, congratulations, and all the best on Wednesday!

Best regards,  
Harry
